

# Cam Manager

## Body Camera Configuration Utility

A camera setup utility for memory access, supported settings, clock synchronization and user/device identification.

Interface preview; build and configuration may vary

### Configure supported settings

Adjust the options exposed by the software build matched to your camera.

### Synchronize the camera clock

Set the camera date and time through the configuration utility.

### Assign camera identifiers

Change user and device IDs for the supported camera workflow.

### Settings

Camera configuration

### Time sync

Date and time

### User / device ID

Camera identification

## Verified camera operations

|                       |                                                                |
|-----------------------|----------------------------------------------------------------|
| Product role          | Camera configuration utility                                   |
| Memory access         | Unlock camera memory on supported devices                      |
| Settings              | Change settings supported by the matched camera/software build |
| Clock                 | Synchronize camera date and time                               |
| User identification   | Change the user ID                                             |
| Device identification | Change the device ID                                           |

## Deployment requirements to confirm

|                  |                                                                           |
|------------------|---------------------------------------------------------------------------|
| Camera pairing   | Camera model and firmware matched to the utility build                    |
| Host environment | Supported OS, drivers and connection method unconfirmed                   |
| Installation     | Current release, host hardware requirements and license terms unconfirmed |

### Configuration notes

Available settings depend on the camera model, firmware and Cam Manager build.

Confirm host OS, drivers and license terms before installation.

The illustrated 4.1 interface is a reference image, not a current-release commitment.
